

Sculptra Modality

Sculptra is a poly-L-lactic acid (PLLA) facial injectable treatment that helps stimulate the skin's natural collagen production. It works gradually to restore the skin's inner structure, resulting in a more youthful-looking appearance. Sculptra helps correct shallow to deep facial wrinkles and folds, including:

- Nasolabial folds (smile lines)
- Marionette lines
- Pre-auricular wrinkles (vertical wrinkles in front of the ears)
- Radial cheek folds (vertical wrinkles below the cheeks)
- Chin wrinkles

Unlike most dermal fillers, which use hyaluronic acid to replace lost volume, Sculptra contains poly-L-lactic acid (PLLA). Once administered, PLLA stimulates fibroblasts to produce collagen, creating a natural-looking effect with the added benefit of long-lasting results.

As we age, collagen — the skin's support structure — diminishes. Collagen makes up 70% of our skin and plays a key role in maintaining elasticity and moisture. Collagen loss leads to sagging and a loss of skin volume. Sculptra addresses the underlying cause of facial ageing: collagen loss. By doing so, it subtly and gradually adds volume, lifting soft tissues and plumping the skin from within.

You will be assessed and 2-4 treatments recommended, reviewed every 5 weeks and added to as required.

Prices

Face includes:

- Nasolabial folds (smile lines)
 - Marionette lines
 - Pre-auricular wrinkles (wrinkles in front of the ears)
 - Radial cheek folds (wrinkles below the cheeks)
 - Chin wrinkle
- £400 per session

Neck: £400 per session

Sculptra Results

Before

After

What to expect

During the procedure.

Your treatment will begin by thoroughly cleansing your skin to remove any makeup. The procedure involves the use of a fine cannula to minimise discomfort.

Immediately after the procedure

Mild to moderate inflammation is normal post-treatment. Some of this initial volume is due to Sculptra itself, while additional swelling may occur as part of the skin's natural inflammatory and healing response. Following the aftercare instructions with regular massage will encourage the Sculptra to integrate with the surrounding tissue and soothe any residual aching.

What happens next

Sculptra is a bio-stimulatory solution that encourages your body to produce its own collagen over the weeks following treatment. Collagen plays a vital role in maintaining skin structure by forming a supportive network beneath the surface. This scaffolding not only restores lost volume but also helps to smooth out wrinkles, providing natural, long-lasting results. Sculptra's active component, poly-L-lactic acid, is not broken down as quickly as traditional dermal fillers which contain hyaluronic acid, hence its associated longevity.

Best Practice

Firstly, I can assure you that my work is inherently safe and secondly, that you will not look unnatural. And finally, I will only use Sculptra to replace lost volume and restore your skin's natural hydration and luminosity. It has taken me several years to finally achieve my Level 7 Certificate in Aesthetic Practice (Ofqual regulated). The Government are in the process of regulating the aesthetics industry and one day everyone, medics, and non-medics alike, will need Ofqual regulated qualifications to practise aesthetics.
